

# Singpass app: Your digital identity in your pocket

Here are some key features which you might find useful for simpler everyday transactions

## Sign digitally

Sign documents and contracts wherever you are, with a validated signature viewable on your preferred system. Just scan a QR code with your Singpass app and authenticate yourself following the on-screen instructions.

## Access personal data easily

View your latest personal information from different public agencies, all in one place, including your CPF balance, HDB flat details, passport number and more.

## Prove your identity in person

Show your digital IC to prove your identity to agencies or businesses that accept the use of it, or tap on the barcode icon and scan your NRIC/FIN barcode at kiosks, such as those at libraries and polyclinics. You may also scan a QR code and provide consent to sharing your details from government sources with organisations, without bringing any physical documents.

## One-tap access to digital services

Login shortcuts allow you to quickly access commonly used government digital services straight from the homepage of your Singpass app. The list will continue to grow, as more relevant shortcuts are added.

## Timely notifications

Receive relevant and timely notifications from Government agencies through your Singpass app inbox, including reminders to renew your passport, or your eligibility for government benefits.

**NEW**

**Face Verification** is the latest two-factor authentication (2FA) method that was launched for Singpass users. This feature checks whether an individual is who he claims to be, at a specific moment for a specific purpose, by comparing the captured facial images with the government's biometric database. It works on a computer that is equipped with a web camera or on a smartphone with a front-facing camera.
